

Action Plan on Global Governance of Artificial Intelligence (full text)

2025-07-26 12:54 Source: Xinhua News Agency

Xinhua News Agency, Shanghai, July 26 (Xinhua) On July 26, the 2025 World Artificial Intelligence Conference and the High-Level Conference on Global Governance of Artificial Intelligence issued the "Artificial Intelligence Global Governance Action Plan". The full text reads

AI Global Governance Action Plan

Artificial intelligence is a new field of human development, an important driver of a new round of technological revolution and industrial change, and can also be an international public good for the benefit of mankind. Artificial intelligence brings unprecedented opportunities for development, as well as unprecedented risk challenges. In the era of intelligence, only by working together with the world can we fully realize the potential of artificial intelligence while ensuring the security, reliability, controllability and fairness of its development, and ultimately implement the relevant commitments of the United Nations Future Compact and its annex, the Global Digital Compact, to create an inclusive, open, sustainable, fair, safe and reliable digital and smart future for all.

To this end, we propose the Plan of Action on Global Governance of Artificial Intelligence, which calls on all parties to take effective action based on the goals and principles of doing good for the people, respecting sovereignty, development orientation, safety and control, fairness and inclusiveness, and open cooperation, and to work together to promote global artificial intelligence development and governance.

1. "Together seize the opportunities of artificial intelligence". Calls upon all entities, including governments, international organizations, enterprises, scientific research institutions, private institutions and individual citizens, to actively participate and work together to accelerate the construction of digital infrastructure, jointly explore cutting-edge innovations in artificial intelligence technology, and promote the global scale of

artificial intelligence. Popularize and apply it to maximize the role of artificial intelligence in empowering global economic and social development and assisting in the implementation of the United Nations 2030 Agenda for Sustainable Development Great potential to address global challenges, among other things.

II. Promote the innovative development of artificial intelligence. Adhering to the spirit of openness and sharing, we encourage bold attempts to explore, build various international scientific and technological cooperation platforms, create an innovative and friendly policy environment, strengthen policy and regulatory coordination, promote technical cooperation and achievement transformation, reduce and eliminate technical barriers, and jointly promote artificial intelligence technology innovation Breakthroughs and sustainable development, deeply explore “ artificial intelligence + ” open application scenarios, and enhance the level of global artificial intelligence innovation and development.

3. Promote artificial intelligence to empower thousands of industries. Promote artificial intelligence to empower industrial manufacturing, consumption, trade circulation, medical care, education, agriculture, poverty reduction and other fields, promote the in-depth application of artificial intelligence in scenarios such as autonomous driving and smart cities, and build a rich and diverse, healthy and good artificial intelligence application ecosystem. Promote the construction and sharing of intelligent infrastructure, carry out transnational cooperation in the application of artificial intelligence, exchange best practices and jointly explore and promote artificial intelligence to fully empower the real economy.

IV Accelerating the construction of digital infrastructure. Accelerate the construction of global clean electricity, new generation networks, intelligent computing power, data centers and other infrastructure, improve the interoperable artificial intelligence and digital infrastructure layout, promote the construction of a unified computing power standard system, and support countries, especially the Global South, to combine their own national conditions Develop artificial intelligence technology and services to help the Global South truly contact and apply artificial intelligence and promote the inclusive and inclusive development of artificial intelligence.

V. Creating a diverse, open and innovative ecosystem. Give full play to the role of diverse entities and platform mechanisms such as governments and industry and academia in various countries, jointly promote international exchanges and dialogue on artificial intelligence governance, create a transnational open source community and a safe and reliable open source platform, promote the open sharing of basic resources, lower the threshold for technological innovation and application, and avoid Duplicate

investment and waste of resources promote the inclusiveness and accessibility of artificial intelligence technology services. Promote the construction of an open source compliance system, clarify and implement technical security guidelines for open source communities, promote the open sharing of development resources such as technical documents and interface documents, strengthen the construction of open source ecology such as compatibility, adaptation and interconnection of upstream and downstream products, and achieve open flow of non-sensitive technical resources.

VI Actively promote the supply of high-quality data. Promote the development of artificial intelligence with "high-quality data, cooperate to promote the orderly and free flow of data in accordance with the law, explore and build a global mechanism platform for data sharing, cooperate to create high-quality data sets, and inject more nutrients into the development of artificial intelligence". At the same time, it actively maintains personal privacy and data security, improves the diversification of AI data corpus, eliminates discrimination and prejudice, and promotes, protects and preserves the diversity of AI ecosystems and human civilization.

VII. Effective response to energy and environmental problems. Advocate the concept of sustainable artificial intelligence, support the continuous exploration of innovative resource-saving and environmentally friendly artificial intelligence development models, jointly formulate artificial intelligence energy and water efficiency standards, and promote green computing technologies such as low-power chips and efficient algorithms. Encourage dialogue and cooperation on energy conservation in the development of artificial intelligence to jointly find the best solutions. Promote artificial intelligence to empower green transformation and development, climate change response, biodiversity protection and other fields, expand the application of artificial intelligence technology in relevant aspects, strengthen international cooperation and share best practices.

VIII. Promoting consensus on standards and norms. Support the promotion of dialogue among national standards-setting bodies, rely on international standards organizations such as the International Telecommunication Union, the International Organization for Standardization and the International Electrotechnical Commission, attach importance to the role of industry, accelerate the formulation and revision of technical standards in key areas such as safety, industry and ethics, and establish a scientific, transparent and inclusive normative framework in the field of artificial intelligence. Actively eliminate algorithmic bias, balance technological progress, risk prevention and social ethics, and promote the inclusion and interoperability of standard systems.

IX The public sector is the first to deploy applications. The public sector in each country should become a leader and demonstrator in the application and governance of artificial intelligence, actively prioritize the deployment of reliable artificial intelligence in public services such as health care, education and transportation, and strengthen international exchanges and cooperation. At the same time, the security of the above-mentioned artificial intelligence system is regularly evaluated, respecting intellectual property rights such as patents and software copyrights. Strictly abide by data and privacy protection, actively explore and train data for orderly transactions in accordance with the law, jointly promote the compliant and open utilization of data, and improve the level of public management and services.

10. Carry out artificial intelligence security management. Carry out timely research and judgment on artificial intelligence risks, propose targeted prevention and response measures, and build a security governance framework with broad consensus. Exploring classified and hierarchical management, establishing an artificial intelligence risk testing and evaluation system, and promoting the sharing of threat information and the construction of emergency response mechanisms. Improve data security and personal information protection specifications, and strengthen data security management in training data collection, model generation and other aspects. Increase investment in technology research and development, implement safety development specifications, and improve the interpretability, transparency, and security of artificial intelligence. Explore the traceability management system for artificial intelligence services to prevent misuse and abuse of artificial intelligence technology. Promote the establishment of open platforms, share best practices, and promote international cooperation in artificial intelligence security governance on a global scale.

11. Jointly implement the Global Digital Compact. Actively implement the relevant commitments of the United Nations Compact for the Future and its annex, the Global Digital Compact, and adhere to the United Nations as the main channel, with the goal of helping developing countries bridge the digital divide and achieve equitable and inclusive development, and promote the construction of an inclusive and equitable multilateral global digital governance system based on compliance with international law, respect for national sovereignty and differences in development. Support the establishment and early operation of two mechanisms, the International Scientific Group on Artificial Intelligence and the Global Dialogue on Artificial Intelligence Governance, under the framework of the United Nations, for meaningful discussions on global governance of artificial intelligence, in particular the promotion of safe, equitable and inclusive development of artificial intelligence.

XII Strengthening international cooperation in capacity building of artificial intelligence. Put international cooperation in artificial intelligence capacity building in a prominent position on the global artificial intelligence governance agenda, encourage leading artificial intelligence countries to cooperate in artificial intelligence infrastructure construction, jointly build joint laboratories, jointly build mutual recognition platforms for security assessment, and organize artificial intelligence capacity building education and training, organize supply and demand docking activities in the artificial intelligence industry, Together, we will carry out practical actions such as the construction of high-quality data sets and corpus for artificial intelligence, and support developing countries in strengthening comprehensive capacity-building in the areas of innovation, application and governance of artificial intelligence. Together, we will improve the public's artificial intelligence literacy and skill levels, especially to safeguard and strengthen the digital and intelligent rights and interests of women and children, and bridge the intelligent divide.

13. Build an inclusive governance model with multi-party participation. Support the establishment of an inclusive governance platform based on the public interest, with the participation of all types of entities. Encouraging AI companies in various countries to engage in dialogue and exchange, and to promote AI innovation, application, and ethical and security cooperation in specific fields and scenarios, drawing on their respective application practice cases in different fields of AI. Encourage various research think tanks and international forums to build global and regional exchange and cooperation platforms to ensure that artificial intelligence researchers, developers and governance departments in various countries maintain technical and policy communication.
